

IT ALWAYS PAYS OFF

PV systems and energy solutions by Q CELLS

Q CELLS
Engineered in Germany

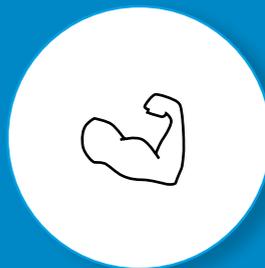

MY HOUSE, MY ROOF, MY ELECTRICITY AND Q CELLS AT MY SIDE

With your own solar system from Q CELLS you can reduce your electricity costs, secure your long-term energy supply and protect the environment sustainably – with full cost control and guaranteed profitability. Your solar system always works under the same conditions and produces clean energy. You are more or less cushioned against rising electricity costs, while increasing the value of your property as an added benefit.

In combination with our cloud and storage solution you can go a decisive step further: You secure a fixed quota of climate-friendly green electricity, while making yourself 100% independent of your power supplier – all year round.

The design of Q CELLS solar modules not only looks good, it is optimised to ensure maximum long-term efficiency, stability and security, while also keeping weight low.

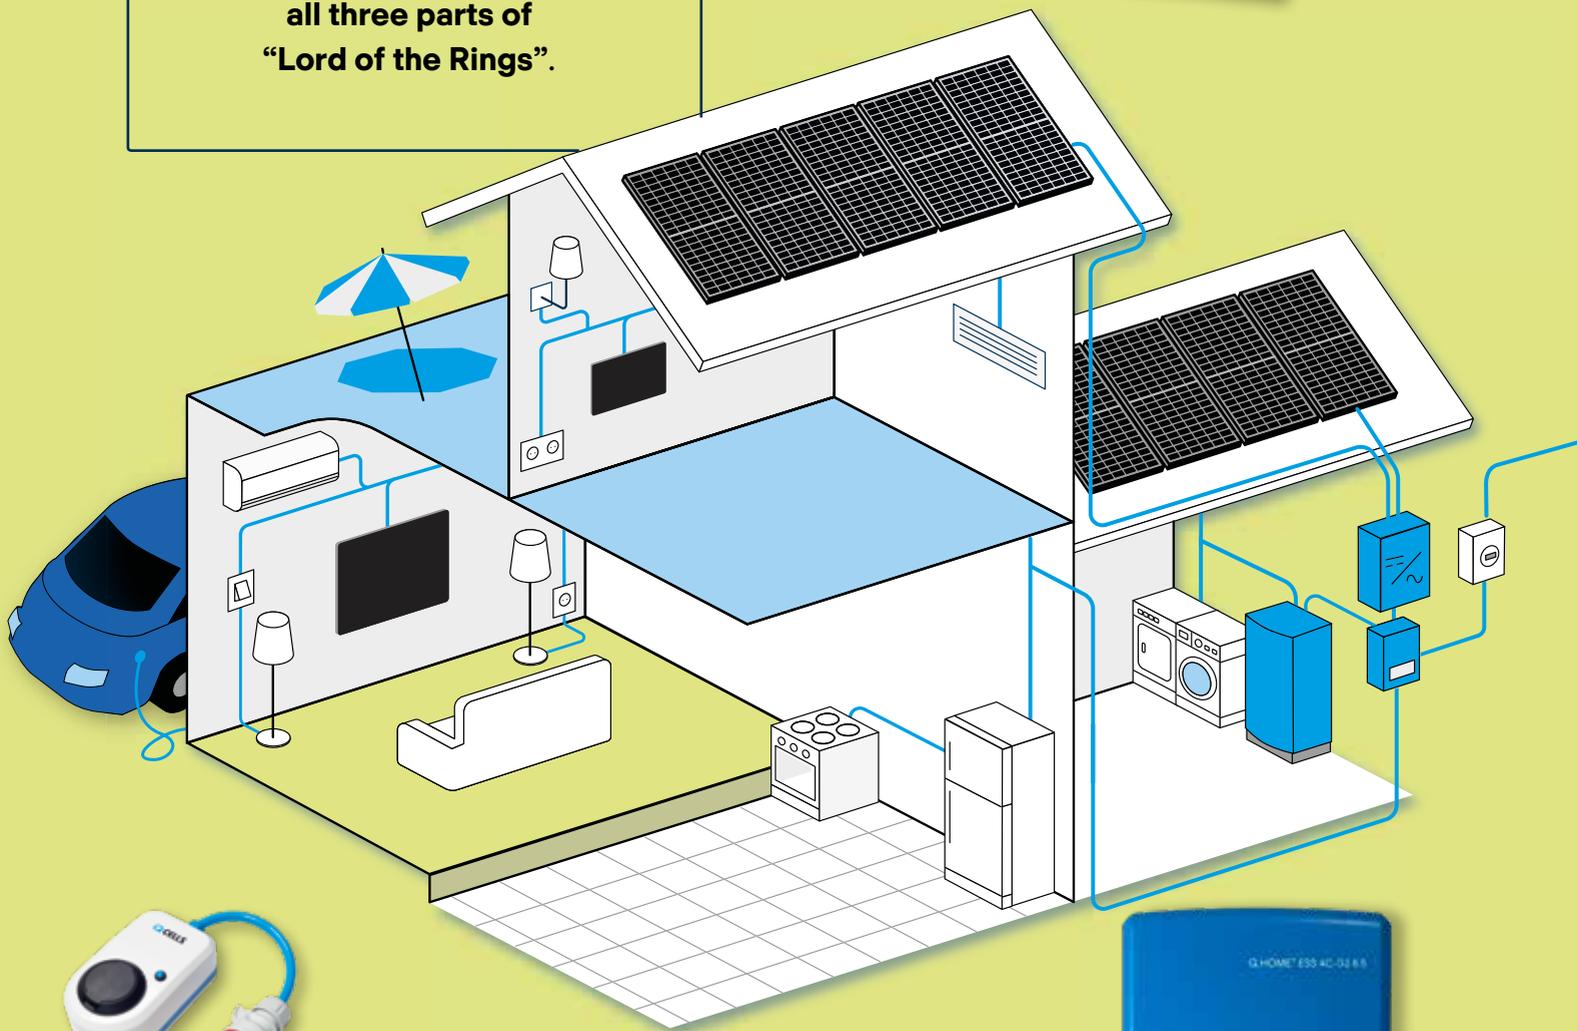

Did you know that?

Three solar modules generate one kilowatt hour of electricity in one hour – equivalent to the amount of energy you need to carry around **6,000 crates of beer from the ground floor to the 1st floor.**

Did you know that?

With only three solar modules you generate more of your own electricity in just one hour than you need to **work on your laptop for around 60 hours, blow dry your hair for an hour or watch all three parts of "Lord of the Rings".**

E-MOBILITY

You can charge your e-car with our extremely compact mobile charging station Q.HOME EDRIIVE-G1 both at home and on the road, at any power outlet. In conjunction with our green electricity tariff Q.ENERGY Smart, you can also profit directly from the most favourable stock exchange prices fully automatically.

STORAGE SOLUTION

Our energy storage system lets you increase your own consumption to up to 2/3 of your total power requirement and reduce your electricity costs sustainably. We give you a 10 year guarantee on our energy storage.

SOLAR MODULES

Thanks to the Q.ANTUM DUO Technology developed by us, our solar modules are characterised by particularly high performance in a small area: Maximum light output, even when the sky is cloudy. Optionally in black and also with 25 instead of 12 years full warranty. Discover our latest Q.ANTUM DUO Z modules with a zero-gap surface.

ULTIMATE CONFIDENCE

Q CELLS' advanced Q.ANTUM DUO Technology, backed by a 25-year product and performance warranty. Q.PEAK DUO-G8+ and Q.PEAK DUO-G9+ is Q CELLS at the top of our game, empowering you to live a life more powerful. Allowing you to soak up more sun and reap peak performance for decades to come.

INVERTERS

Inverters convert the direct current (DC) fed in from the roof into alternating current (AC): With an efficiency of more than 99%, they operate almost loss-free and can be integrated easily into your power grid in compliance with all certification standards.

4 steps to solar power

Your way to your own solar system:

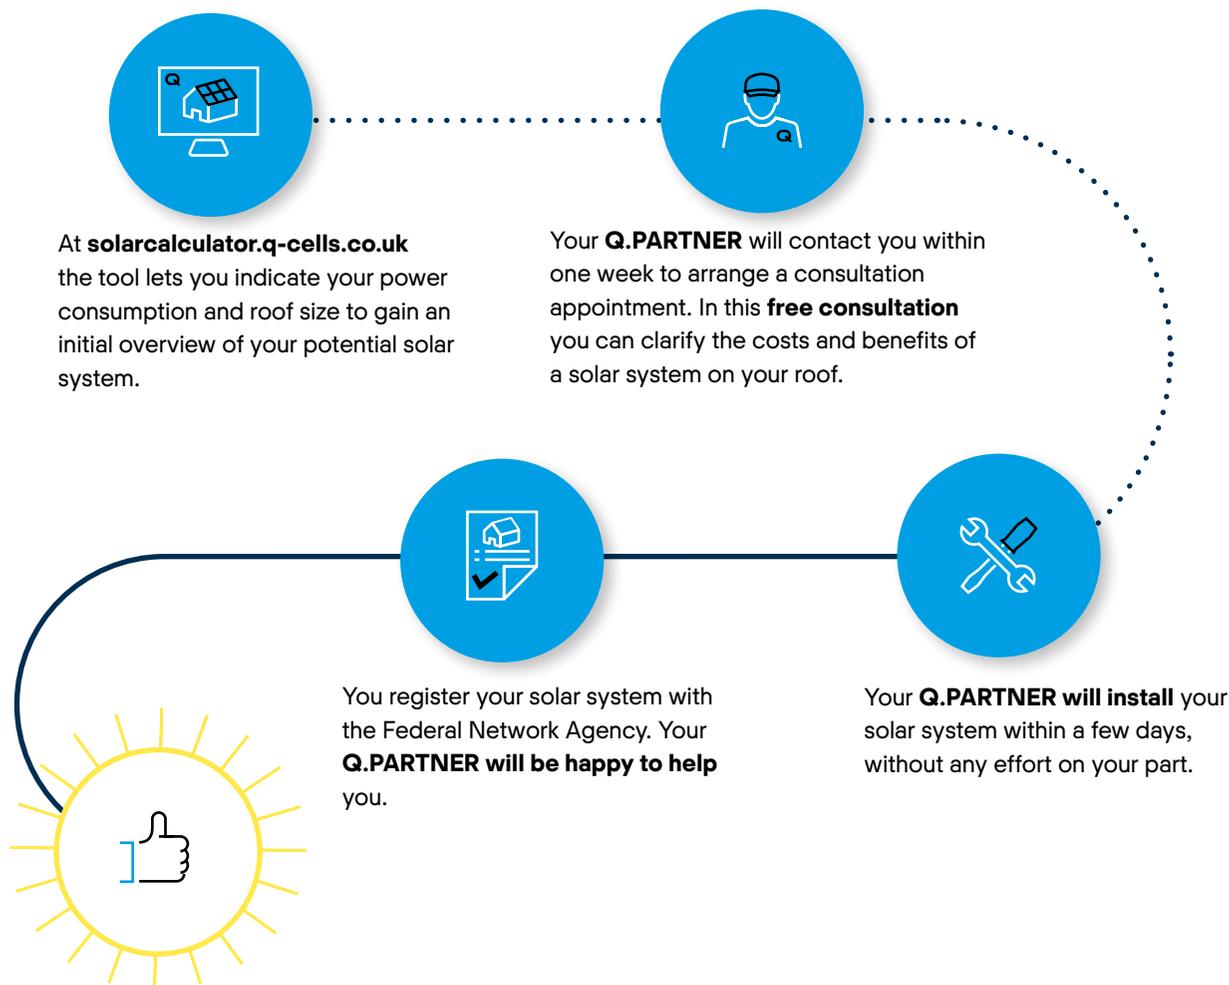

1. Information and advice
2. Solar financing & grants
3. Solar installation
4. Service & Support

Q CELLS STANDS FOR SOLAR ENERGY BY CONVICTION, FOR MORE THAN 20 YEARS

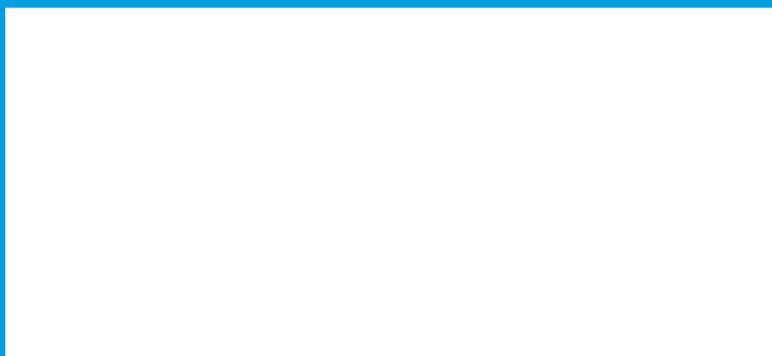

As one of the world's largest solar companies, Hanwha Q CELLS offers a wide range of solar products and applications. We develop and supply everything from solar modules, solar systems, high-performance solar power plants and complimentary energy supply solutions all from a single source. As a homeowner, we can provide you with all the components you need for independent power

production: Solar modules, mounting systems, energy storage and electricity tariffs. As an internationally operating company, we stand for a cooperative partnership and progress actively embodied. Q CELLS has been working on the future of solar technology worldwide for more than two decades: for a sustainable energy supply on a planet worth living on.

Just 4 steps to your own solar system
